Patch Panels

FEATURES

- **Angled Patch Panel**

- **Keystone Patch Panel**

- **24 Port**

- **Unloaded**

- **1u Chassis**

- **Can be used with Cat6a, Cat6 & Cat5e Keystone Jacks**

DESCRIPTION

The 1u Unloaded Keystone 'V' Patch Panel provides the facility to mount up to 24 Keystone Jacks in a 1u chassis.
The panel can be used with Cat6a, Cat6 and Cat5e Keystone Jacks - which must be ordered separately.
Keystone Jacks can be easily installed and removed from the rear of the panel, facilitating quick moves, adds & changes. The angled front plate means that patch leads can be easily dressed to either side of the rack or cabinet, thus removing the need for patch lead management bars in increasing port density.
The rear cable management bar can be easily detached without the requirement for any tools, thus providing improved access for installing or removing of jacks.
The panel is supplied complete with a 400mm earth cable for connection to the cabinet or rack earth bonding system.
